

CRM Checklist Tool: Presentation Guide

A tool for standardizing workflows and preventing recurring issues.

1. Why we built this (Preventing Recurring Issues)

Recurring issues happen because of manual errors or forgotten steps. This tool creates a standard checklist that every team member must follow. It calculates "Gaps" between tasks to ensure we never send reminders too fast or too slow. It provides a professional audit trail via PDF reports for every campaign.

2. Key Features to Highlight

- Batch Management: Group tasks by campaign names.
- Intelligent Timing: Automatic hour gap calculation between activities.
- Progress Tracking: Visual bars showing how close we are to 100%.
- Professional Export: One-click PDF for management reports.
- Data Security: Build-in backup system to save and restore all data.

3. How to Demo (The Workflow)

1. Start: Name your batch (e.g., "April Market Prep") and click Save.
2. Build: Add tasks with date and time. Watch the "Gap" calculate automatically.
3. Execute: Check off tasks as you finish them. Watch the progress bar.
4. Document: Click Export PDF to generate the official campaign report.
